Service and Results

Here at H&H, we are certain that we can help you build the Panel you need. We have been in the Electrical business for over 37 Years and look forward to a bright future. In the beginning we dealt mainly with the Coal Mining Industry, but as technology changed, so did we. We started building panels for all of our mining customers and that then poured over in to the industrial side where we do most of our Panel business. Our main goal is to service you the customer as quickly and efficiently as possible. We feel that we have a great advantage over our competitors being centrally located and superior in performance. We want to service you better and more productively than anyone else in the business.

Services Provided

Soft Start Drives

H&H can build to your specification any Soft Start Drives for most any size motor you may need.

150HP Soft Start Pump Starter, 250HP Soft Start Fan Starter , and 1000V Distribution Panel

Automation

Using advanced programming software we can develop operator interface programs that will run on touch screen technology. This technology will do multiple tasks that are currently done with mechanical pushbuttons, lights, and switches; thus reducing the chance of mechanical failure. This is a great benefit saving you both time and money.

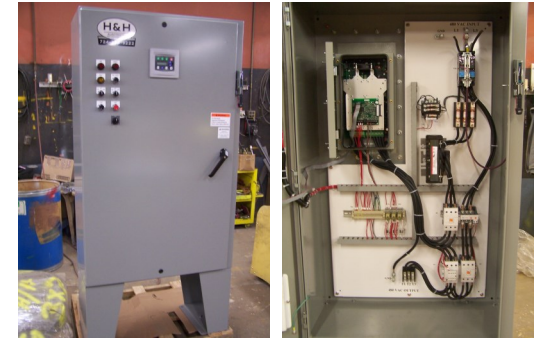

Advanced HMI touch panel control for a tire shredding plant

Soft Start Pump Control for water discharge at a CONSOL Energy Prep Plant

4160V Test Stands and a PLC Cabinet for JOY Mining

VFD for a belt conveyor at a cleaning facility

Variable Frequency Drives

Variable Frequency drives are essential when enhanced motor control is desired. At H&H we can provide you with any type of variable frequency drive in any type of enclosure you desire.

Underground Dewatering skid for CONSOL Energy. PLC Controlled
